What will be covered

Alaska Native Population Projections:
Input and Results

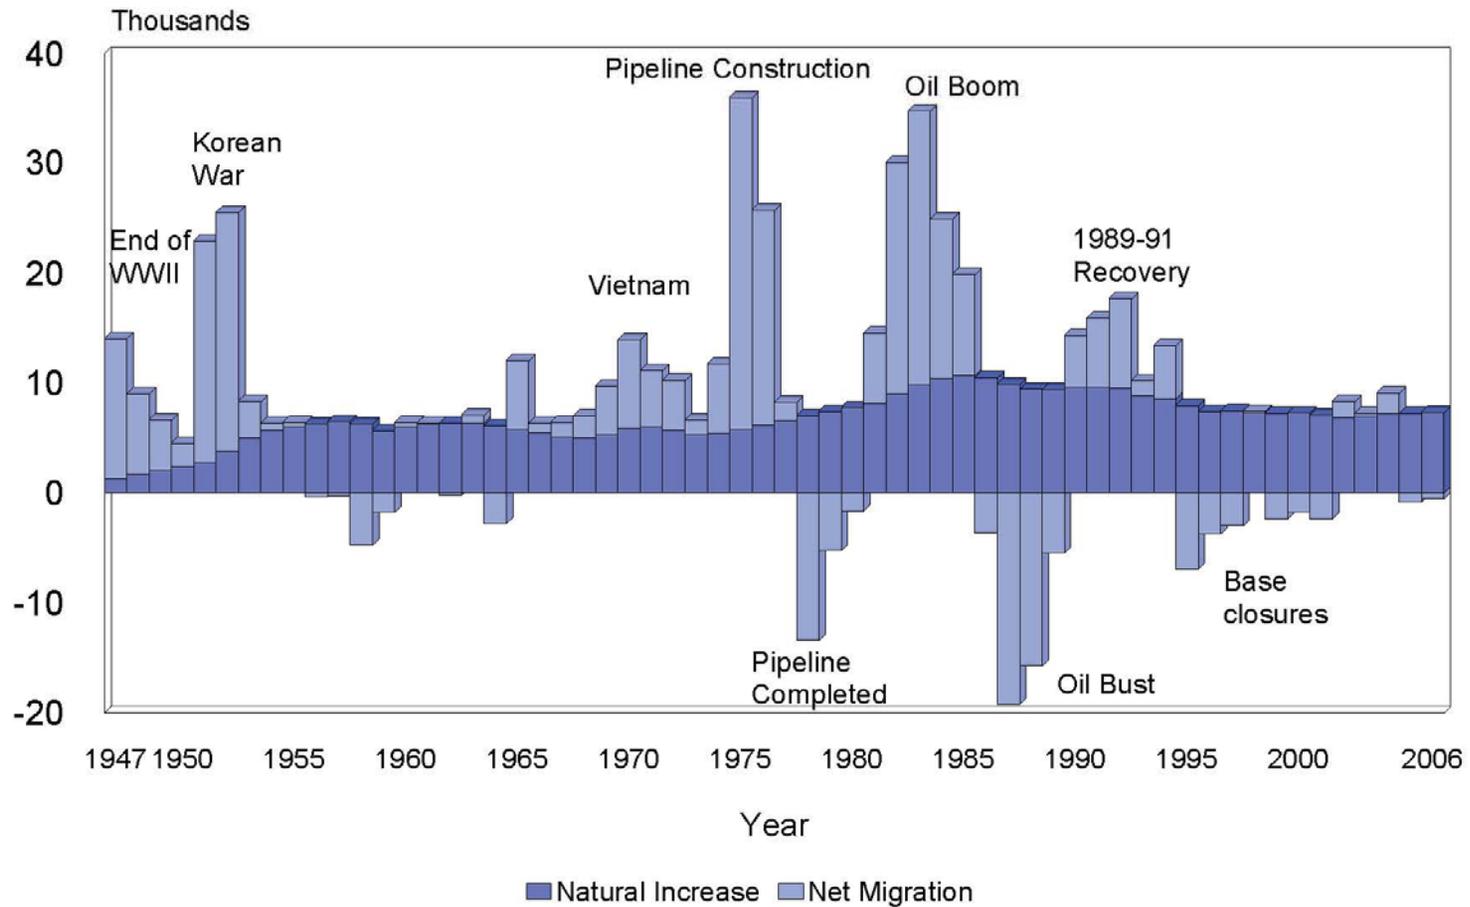

What These Projections Offer:

Projected future population by age and sex for Alaska Natives, based on projected fertility, mortality and migration rates.

But they don't offer a crystal ball gaze into the future

First: A Very Brief Overview of Alaska's Population History

Migration

Alaska Native Net Migration

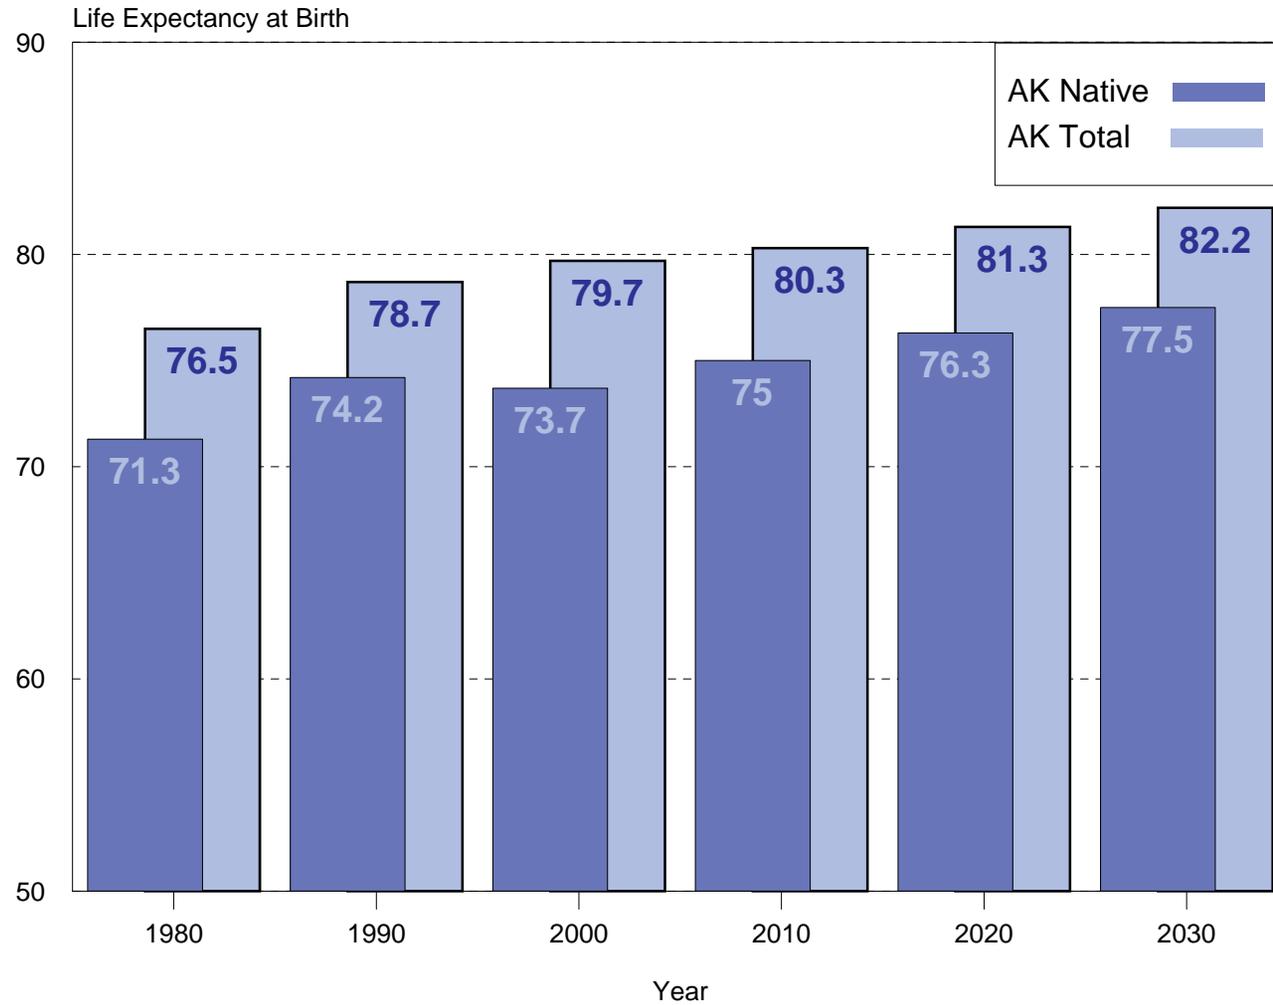

Moderate and relatively stable.

Projected to be slightly negative, as most Alaska Natives live in Alaska.

Projected to be about .25 percent per year.

Regional Projections for the Total Population

Total Fertility Rates Across the State

Highest in areas with high proportion of Alaska Natives.

Lowest (in some cases less than 2.0) in Southeast.

Net Migration Across the State

Very unpredictable, and also very important to knowing the future.

By far the highest is in Mat-Su.

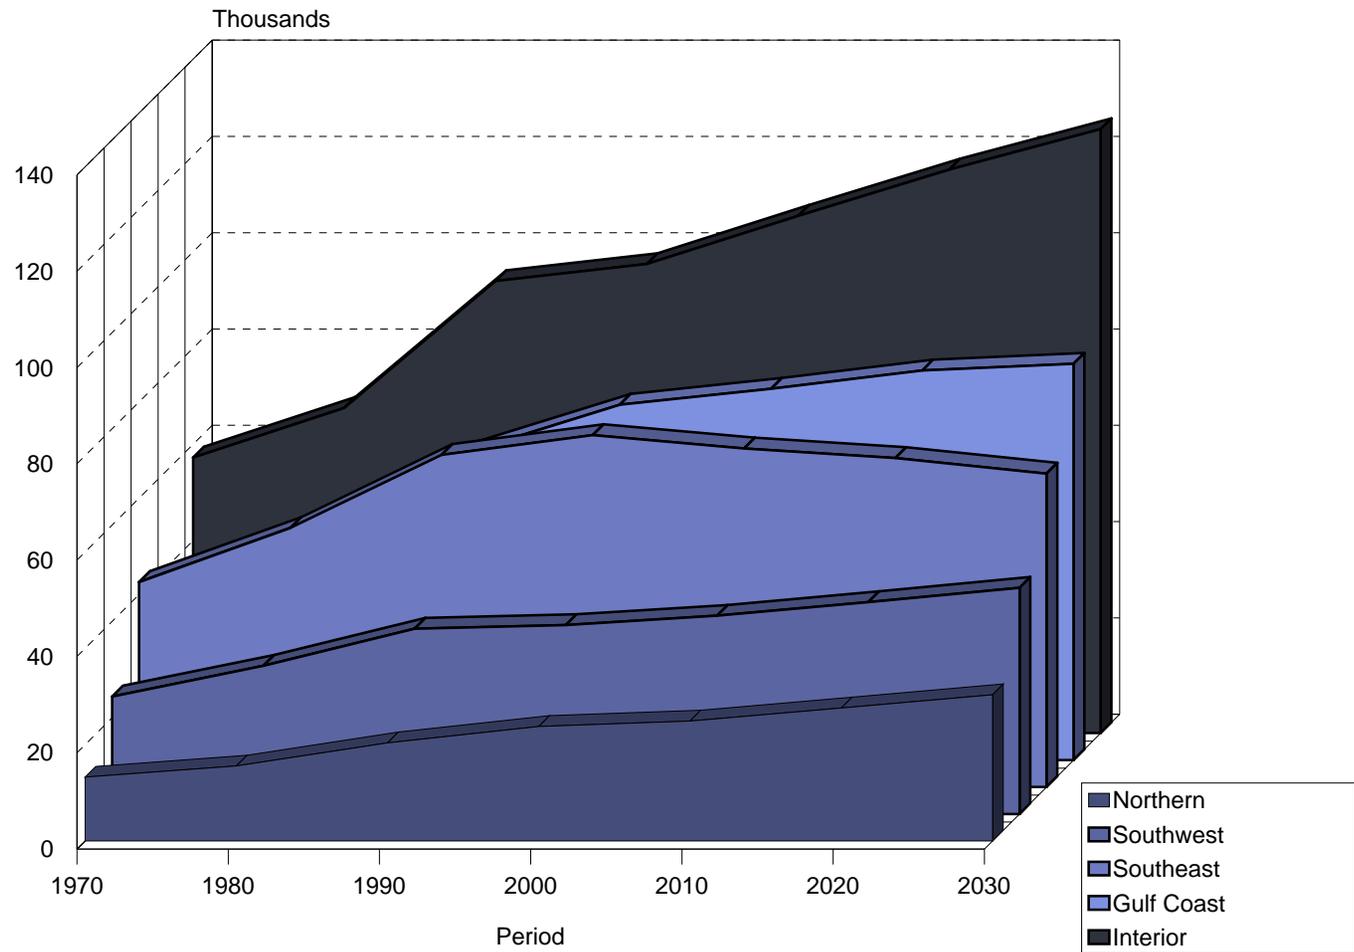

Roughly zero or negative in most other places, but age profile of migration matters a lot here.

Life Expectancy Across the State

Not possible to determine directly, as data is so limited.

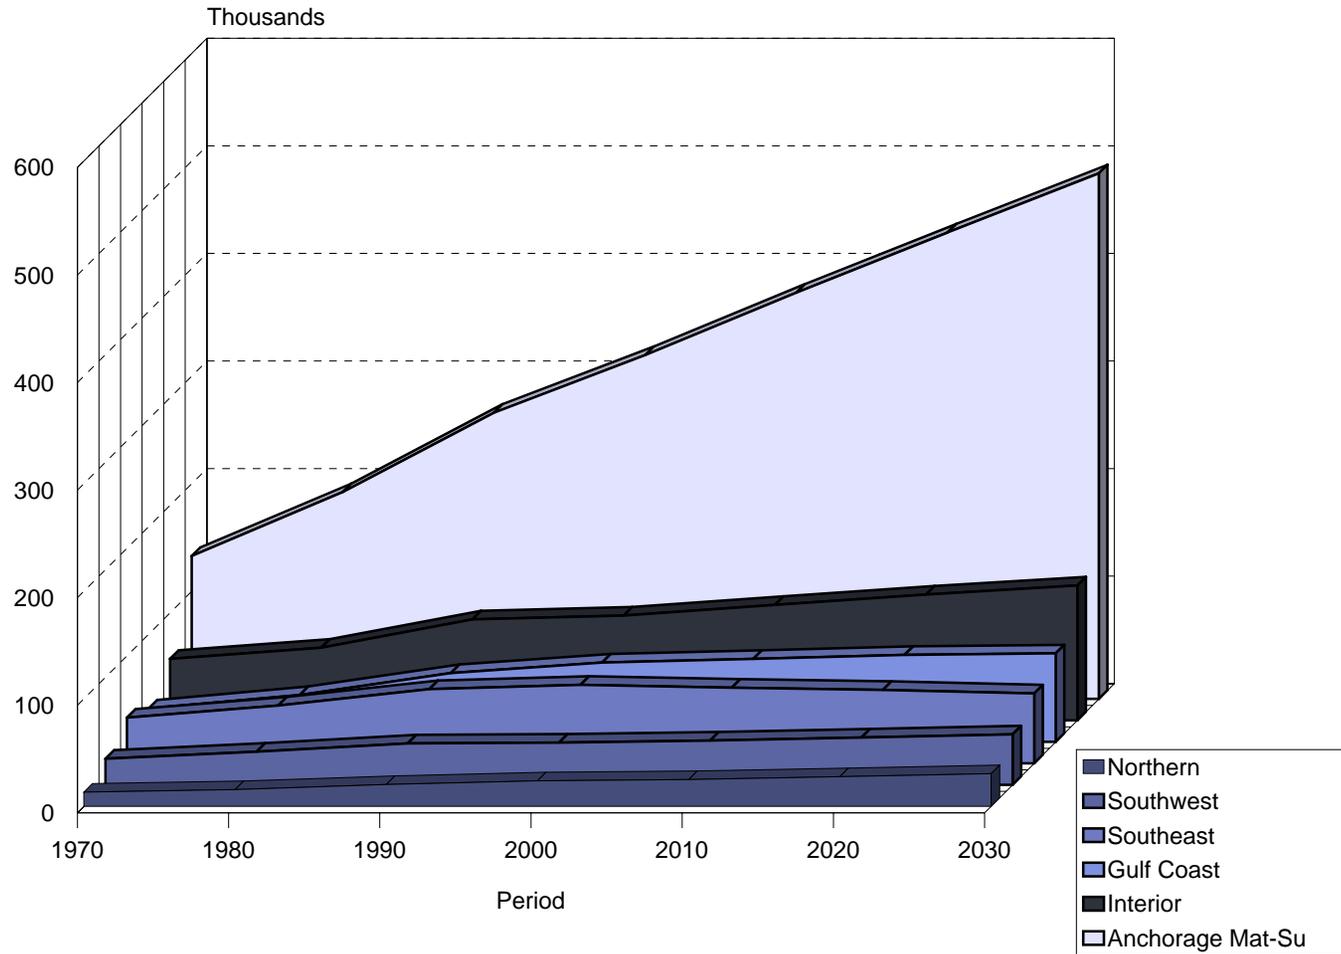

It was roughly estimated based on the proportion Alaska Native and non-Native in the borough.
